

Investment Behaviour Analysis Project Report

Investment Behaviour Analysis Dashboard developed during my Power BI Developer Internship at Cognifyz Technologies using Power BI, Excel, DAX, and interactive business intelligence reporting.

Investment Behaviour Analysis Dashboard – Power BI Internship Project

Project Overview

This repository contains the complete work completed during my **1-Month Power BI Developer Internship** at Cognifyz Technologies

During this internship, I successfully completed **7 analytical tasks** focused on understanding the **investment behaviour of customers** using **Power BI, Excel, DAX, and Data Visualization techniques**.

The project involved:

- Data exploration and cleaning
- Investment behaviour analysis
- Gender-based investment analysis
- Savings objective analysis
- Financial preference analysis
- Interactive dashboard development
- Insight generation using visual storytelling

The final output was a fully interactive Power BI dashboard capable of delivering meaningful business insights from raw financial data.

Internship Project Highlights

✓ Completed 7 Power BI analytical tasks ✓ Built multiple visualization dashboards ✓
Performed data cleaning and preprocessing ✓ Created KPI cards and DAX measures ✓
Developed interactive reports and charts ✓ Generated customer investment insights ✓
Designed a professional business intelligence dashboard

Tools & Technologies Used

Tool	Purpose
Power BI	Dashboard Development & Visualization
Microsoft Excel	Data Cleaning & Analysis
DAX	KPI Calculations & Measures
CSV Dataset	Raw Data Source
Data Visualization	Insight Generation

Dataset Description

The dataset includes:

- Customer demographics
 - Age & gender information
 - Investment avenues
 - Savings objectives
 - Financial behaviour patterns
 - Mutual Funds preferences
 - Equity Market investments
 - Government Bonds analysis
 - Investment decision factors
 - Investment duration preferences
-

Tasks Completed During Internship

Task 1 – Data Exploration & Summary

Objective

Understand the structure of the dataset and generate summary statistics.

Work Performed

- Imported CSV dataset into Power BI
- Performed Exploratory Data Analysis (EDA)
- Created DAX measures
- Generated summary KPIs
- Analyzed savings objectives

Visualizations Created

- KPI Card Visuals
- Pie Charts
- Bar Charts
- Column Charts

Key Insights

- Average age of investors
 - Percentage of people having investments
 - Most common savings objectives
-

Task 2 – Gender-Based Investment Analysis

Objective

Analyze investment preferences based on gender.

Analysis Performed

- Equity Market comparison
- Mutual Funds comparison
- Government Bonds comparison
- Gender-wise average investment analysis

Key Findings

- Male investors showed higher interest in Equity Markets
- Female investors preferred Mutual Funds more
- Government Bonds were preferred more by male investors

✓ Task 3 – Objective-Based Investment Analysis

Objective

Analyze relationships between savings objectives and investment avenues.

Savings Objectives Covered

- Capital Appreciation
- Growth
- Income

Analysis Included

- Objective-wise investment comparison
- Correlation analysis
- Average investment calculations
- Visual comparison reports

Key Insights

- Different objectives influence investment decisions differently
- Strong relationships observed between savings goals and investment avenues

✓ Task 4 – Investment Preference Analysis

Focus Areas

- Investment avenue preferences
- Financial product comparison
- Customer investment behaviour
- Risk-oriented investment choices

Dashboard Features

- Comparative visual charts
 - Interactive filtering
 - Dynamic insights
-

✓ Task 5 – Financial Behaviour Analysis

Focus Areas

- Customer financial patterns
- Savings behaviour
- Investment distribution analysis
- Financial decision trends

Visualizations Used

- Pie Charts
 - Bar Graphs
 - Comparative Analysis Visuals
-

✓ Task 6 – Investment Trend Analysis

Focus Areas

- Investment duration analysis
- Long-term vs short-term investment behaviour
- Trend visualization
- Investment pattern analysis

Key Outcomes

- Understanding investor behaviour across time periods
 - Trend identification using interactive charts
-

✓ Task 7 – Interactive Dashboard Development

Final Deliverable

Built a complete interactive dashboard integrating all insights generated during the internship.

Dashboard Features

- Interactive slicers & filters
- KPI cards
- Dynamic charts

- User-friendly interface
- Investment comparison visuals
- Business intelligence storytelling

Dashboard Screenshot

Dashboard Features

- ✦ Interactive Dashboard
 - ✦ Dynamic Filtering
 - ✦ KPI Tracking
 - ✦ Comparative Analysis
 - ✦ Financial Insights
 - ✦ Clean UI Design
 - ✦ Business Intelligence Reporting
-

Skills Gained During Internship

- Power BI Dashboard Development
 - Data Visualization
 - DAX Measures
 - Business Intelligence Reporting
 - Data Cleaning & Transformation
 - Financial Data Analysis
 - Insight Generation
 - Interactive Reporting
 - Analytical Thinking
-

Internship Experience

This internship helped me gain hands-on experience in:

- Real-world business intelligence projects
- Power BI dashboard development
- Financial analytics
- Visualization design
- Data storytelling
- Customer behaviour analysis

The project strengthened my practical understanding of converting raw datasets into actionable business insights.

Conclusion

The Investment Behaviour Analysis Dashboard project successfully demonstrated the practical use of Power BI and Excel for financial analytics and business intelligence reporting. Through seven analytical tasks, the project explored customer investment behaviour, savings objectives, financial preferences, and investment trends using professional visualization techniques and interactive dashboards. The final dashboard effectively transformed raw financial data into meaningful and actionable insights, reflecting strong analytical, visualization, and dashboard development capabilities.
